DETAILED ACTION

Response to Arguments

- 1. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.
- 2. Applicant's arguments directed to the 112 rejection have been fully considered but they are not persuasive. Applicant states that one of the ordinary skill in the art would understand the meaning of the limitation; however, the specification neither applicant argument disclosed what would be understood by one of the ordinary skill in the art.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 8, 16 and 25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 5. The term "substantially" in claim 8, 16 and 25 is a relative term which renders the claim indefinite. The term "substantially" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

Application/Control Number: 10/788,460 Page 3

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 8. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 9. Claims 1-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ayyagari US 20050169222A1 in view of Benveniste US 20060039281A1.

Art Unit: 2617

As to claim 1, Ayyagari discloses the method for providing a relative level of fairness and Quality of Service (QoS) [see par. 0015] comprising: identifying a set of non-interfering access points (see par. 0017); allowing only the identified set of noninterfering access points to transmit during a Contention-Free Period (CFP) slot; and allowing all access points to transmit after the end of the CFP (see par. 0042-0057). Ayyagari dos not specifically disclose a wireless local area network (WLAN) network. In an analogous art, Benveniste discloses the method for providing a relative level of fairness and Quality of Service (QoS)[see par. 0032] in a wireless local area network (WLAN) network [see par. 0012] comprising: identifying a set of non-interfering access points (see par. 0017); allowing only the identified set of non-interfering access points to transmit during a Contention-Free Period (CFP) slot; and allowing all access points to transmit after the end of the CFP (see par. 0108). Therefore, it would have been obvious to one of the ordinary skill in the art at the time of the invention to use in a WLAN system the non-interfering techniques to avoid collisions and increase communication quality.

As to claim 2, Ayyagari discloses the method further comprising dividing the CFP into one or more slots (see fig. 2,4,6; par. 0049).

As to claim 3, Ayyagari discloses the method further comprising: assigning one or more of the so divided slots to an access point which is allowed to transmit based on the number of users associated with the access point (see fig. 2, 4, 6; par. 0049).

Art Unit: 2617

As to claim 4, Ayyagari discloses the method as in claim 3 further comprising: assigning the so divided slots to access points to maximize a lower bound of a slot-to-user ratio (see fig. 2, 4, 6; par. 0045-0049,0094-0101).

As to claim 5, Ayyagari discloses the method further comprising: assigning at least one so divided slot to each access point (see fig. 2, 4, 6; par. 0049).

As to claim 6, Ayyagari discloses the method further comprising controlling each access point making up the identified set of non-interfering access points to ensure each access point begins and ends a transmission during the CFP slot (see fig. 2, 4, 6; par. 0049).

As to claim 7, Ayyagari discloses the method further comprising: transmitting an instruction to initiate transmission of one or more beacon messages to prevent users associated with access points from transmitting prior to the beginning of the CFP (see par. 0045-0049).

As to claim 8, Ayyagari discloses the method further comprising: transmitting an instruction to initiate transmission of one or more beacon messages such that no two adjacent APs in an interference graph may send beacon messages substantially simultaneously (see par. 0045-0049).

As to claim 17, Ayyagari discloses the system further comprising one or more sets of non-interfering access points, each set of access points operable to: transmit during at least one Contention-Free Period (CFP) slot; and transmit after the end of the CFP (see par. 0045-0049).

Application/Control Number: 10/788,460

Art Unit: 2617

Regarding claims 9-25 they are rejected for the same reasons already considered in claim 1-8 shown above.

10. Claims 2-8, 10-17 and 19-25 rejected under 35 U.S.C. 103(a) as being unpatentable over Ayyagari in view of Benveniste, and further in view of Shovodian US 20060050730A1.

As to claim 2, Benveniste discloses everything as disclosed above (see claim1) except for the method further comprising dividing the CFP into one or more slots. In an analogous art, Shvodian discloses the method further comprising dividing the CFP into one or more slots (see fig. 7). Therefore, it would have been obvious to one of the ordinary skill in the art at the time of the invention to combine this teaching to share the CFP.

As to claim 3, Shvodian discloses the method further comprising: assigning one or more of the so divided slots to an access point which is allowed to transmit based on the number of users associated with the access point (see fig. 7).

As to claim 4, Shvodian discloses the method as in claim 3 further comprising: assigning the so divided slots to access points to maximize a lower bound of a slot-to-user ratio (see par. 0170-0171).

As to claim 5, Shvodian discloses the method further comprising: assigning at least one so divided slot to each access point (see par. 0170-0171).

As to claim 6, Shvodian discloses the method further comprising controlling each access point making up the identified set of non-interfering access points to ensure

Art Unit: 2617

each access point begins and ends a transmission during the CFP slot (see par. 0170-0171).

As to claim 7, Shvodian discloses the method further comprising: transmitting an instruction to initiate transmission of one or more beacon messages to prevent users associated with access points from transmitting prior to the beginning of the CFP (see par. 0020).

As to claim 8, Shvodian discloses the method further comprising: transmitting an instruction to initiate transmission of one or more beacon messages such that no two adjacent APs in an interference graph may send beacon messages substantially simultaneously (see par. 0170-0171).

As to claim 17, Shvodian discloses the system further comprising one or more sets of non-interfering access points, each set of access points operable to: transmit during at least one Contention-Free Period (CFP) slot; and transmit after the end of the CFP (see par. 0170-0171).

Regarding claims 10-16 and 19-25, they are rejected for the same reasons of claims 2-8 shown above.

Conclusion

11. Examiner's note: Examiner has cited particular sections in the references as applied to the claims above for the convenience of the applicant. Although the specified citations are representative of the teachings of the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is

respectfully requested from the applicant in preparing responses, to fully consider the references in entirety as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the Examiner.

Any response to this Office Action should be mailed to:

U.S. Patent and Trademark Office Commissioner of Patents P.O. Box 1450 Alexandria, VA 22313-1450

Or faxed to:

571-273-8300

for formal communication intended for entry, informal communication or draft communication; in the case of informal or draft communication, please label "PROPOSED" or "DRAFT"

Hand delivered responses should be brought to:

Customer Service Window Randolph Building 401 Dulany Street Alexandria, VA 22314

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marcos L. Torres whose telephone number is 571-272-7926. The examiner can normally be reached on 8:00am-6:00 PM alt. Wednesday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, George Eng can be reached on 571-252-7495. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
